ЧЕРВОНИЙ ХРЕСТ МЕД ЦЕНТР

MISSION

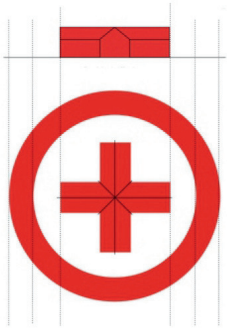

In the context of Russian aggression against Ukraine and the ongoing war in the east of the country, the number of people affected is growing rapidly. They are combatants: soldiers and civilians, including women and children. Suffering from disabilities, injuries and depression, they need immediate help. The RED CROSS MED CENTER project is an initiative of the international community in the spirit of solidarity with the Ukrainian people. In addition to the humanitarian aspect, the RED CROSS MED CENTER project also has a symbolic dimension: it is intended to become a concrete proof of the free world's support for Ukraine right now, despite the war.

OBJECTIVE

The goal of the RED CROSS MED CENTER project is to build medical infrastructure for diagnosis and rehabilitation in Ukraine. The project brings together the initiatives of the community: the creative industry, science, academia and business. The project was launched by AYA Found in cooperation with the National Union of Architects of Ukraine in January 2023 at Forum 4 Design Days in Katowice, Poland. The RED CROSS MED CENTER initiative also has an overarching goal: the restoration of Ukraine must be preceded by the restoration of the condition of those who are at war. This is our moral duty and real support.

THE TEAM

The author of the concept is the architect Aleksander Janicki, designer of numerous architectural objects awarded in Poland and abroad (including the Polish Pavilion at EXPO 2005 in Aichi, Japan, the Nicolaus Copernicus House Museum in Toruń (awarded the EMYA 2022 European Museum of the Year Award), the J. Czapski Pavilion of the National Museum in Kraków, the Promotion and Information Center in the Wawel Royal Castle, the KTO Theater in Kraków, numerous art exhibitions and presentations around the world, including those that are periodically presented in Japan). The project is co-authored by architects from Ukraine under the leadership of Mykola Sheremeta, head of the Lviv organization of the National Union of Architects of Ukraine, and Bohdan Goy, a lecturer at Lviv Polytechnic National University. The project is coordinated by Oleksandr Baranovsky, project coordinator of the National Union of Architects of Ukraine in Kyiv.

RED CROSS MED CENTER

Innovative network of medical centers in Ukraine

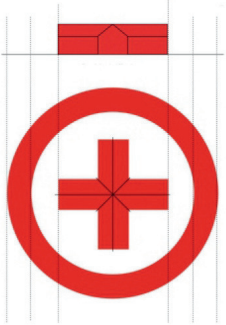

ЧЕРВОНИЙ ХРЕСТ МЕД ЦЕНТР

INNOVATION

The concept of the RED CROSS MED CENTER is to implement innovative know-how based on an international network of academia and startups coordinated by AYA Found. Thus, the project combines the latest achievements of science, engineering and technology. Each of the building series is a kind of HUB of the FUTURE, a collection of many innovative solutions in the spirit of the New European Bauhaus. It is an integral entity that responds to the specific needs of the civilian population of Ukraine, as well as an example of modern infrastructure that illustrates ecological construction in the spirit of sustainable development and concern for the future of the planet.

The RED CROSS MED CENTER is also a well-designed innovative structure that provides enhanced protection of the facility in wartime, while providing for its transformation into a comfortable facility in peacetime. The innovative nature of the modular design is an excellent alternative to traditional building solutions, but also to modular construction, which often lacks the aesthetic qualities that are crucial for therapy. In the fight against trauma and depression, the proposed green interior ecosystem is designed to complement and actively support the healing process.

The unique quality of the RED CROSS MED CENTER solutions is: increased building security, safety associated with innovative building disinfection (sterile conditions) and an unprecedented eco-system of the architecture of the future. This is a holistic design that creates optimal conditions for therapy. This is a design task that is considered comprehensively: from diagnosis to treatment. This is the creation of an infrastructure consisting of new generation system solutions that provide mobility and speed: implementation, expansion, relocation. It also means providing comfortable conditions for diagnosis and rehabilitation. These are innovative solutions in architecture, interior design, and personalization of functional and spatial ideas that allow us to implement solutions in accordance with the expectations of the local community. The versatile nature of the project allows the space to be organized in accordance with the functions defined at the conceptual design stage, offering comfort and safety in different environments. Fast implementation and legal compliance complete the process.

RED CROSS MED CENTER

Innovative network of medical centers in Ukraine

ЧЕРВОНИЙ ХРЕСТ МЕД ЦЕНТР

PARTICIPATION

The RED CROSS MED CENTER project brings together initiatives from the scientific, academic and business communities. It is supported by many institutions from Poland and abroad: The Lesser Poland Regional Chamber of Polish Architects, SARP, the Kraków academic and scientific community, and foundations: AYA Found and In Corpore. Created on the initiative of the Polish and Ukrainian creative communities, it is being implemented by an international team that includes scientists, architects, designers, artists, engineers, computer scientists, and creators of artificial intelligence in diagnostics and medical practice. This is a unique combination of different competencies that allows us to solve problems in a revolutionary way. Within the framework of the programs, a comprehensive project RED CROSS MED CENTER is being implemented: Kultura Futura e-POLIS and assistance to citizens of Ukraine - Kultura Futura Świt. It includes practical activities using scientific achievements in the following areas: computer medicine - combining medicine with computer science and artificial intelligence, robotics and unconventional solutions in the field of architecture.

LOCATION

So far three locations have been identified and agreed with the local Ukrainian authorities: in Stryi, Berezhany, Bibrka, Mostyka and Ternopil. This is the beginning of the implementation process which is an example of solidarity and international cooperation.

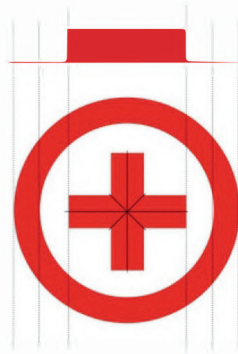

SCALABILITY

The project also has potential on a global scale. The scalability and adaptability of the design components to specific needs can be applied in hotspots around the world. This is a project that responds to the challenges of civilization while pursuing an overarching goal related to diagnosis and therapy: saving people's mental lives.

Zróbmy to razem! Давайте зробимо це разом! Let's do this together! Zapraszamy!

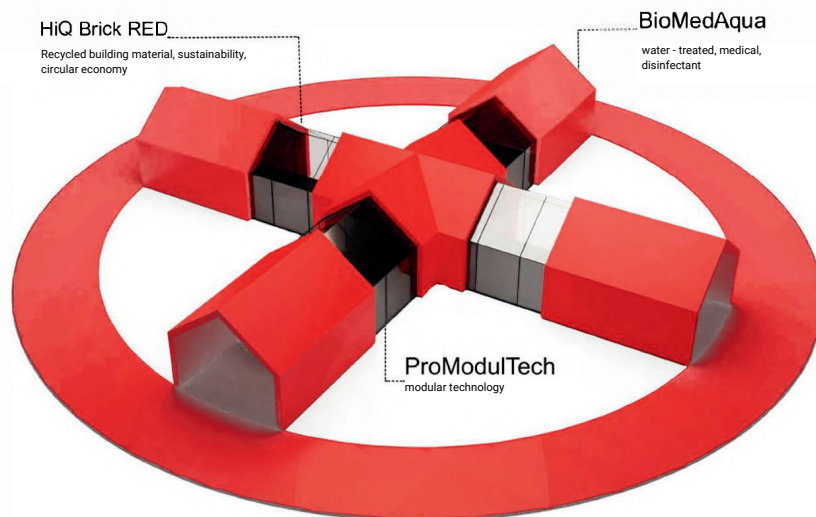

swit.kulturafutura.eu

SAFE HEALTH HOME
SAFETY ON MANY DIMENSIONS

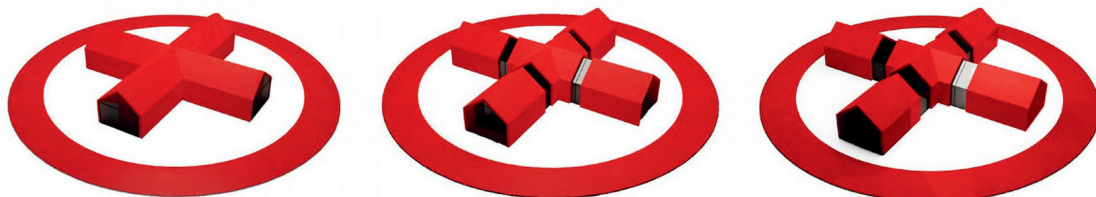

INTERNATIONAL LAW

The shape of the building refers to the Red Cross logo and protects the site in accordance with the rules of the Geneva Convention.

PROTECTION

This is a facility with a high safety standard.
In case of danger, the mobile wings of the building close automatically and protect patients and staff from shelling and debris.

SATELLITE SECURITY ALARM SYSTEM

The building is protected by an integrated satellite system designed for medical facilities.

EPIDEMIOLOGICAL SAFETY

Bio ActiW is one of the many revolutionary technologies that will be implemented in the building. The method of disinfection using dry mist allows us to effectively destroy pathogens in the air. This is a novelty in the construction industry.

KHOW - HOW INNOVATION

This is a unique building in the spirit of the New European Bauhaus, whose architectural aspect is combined with the use of recycled materials, modular technologies, modern approach to resources: "reuse" of water, renewable energy sources and active participation of the local community in the planning process. Not to forget the international context and the "historical" necessity which make it significant.

SCALABILITY AND REPLICATION - AN ECOSYSTEM OF HEALTH

It is also an oasis - a place of rehabilitation, peace and health for the victims and the heroes of 21st century Europe - defenders of the free world.

M-30 / ROAD OF UNITY

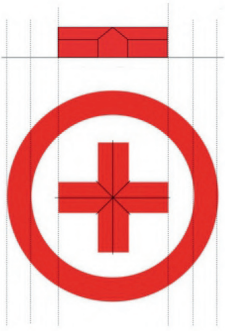

THE IDEA OF UNITY

M-30 / Road of Ukrainian Unity / Road of International Unity.

The M-30 International Motorway (Ukrainian: Автошлях М 30) is a motorway of international importance in Ukraine. Created on April 28, 2021, as a result of the merger of the previously existing M04 and M12 highways, with a length of more than 1,400 kilometers, it is the longest highway in Ukraine. The route was made as part of the celebration of the 30th anniversary of Ukraine's independence. It is also known as the Road of Unity.

As part of the project implementation campaign, the local authorities of three Ukrainian cities (Stryi, Berezhany and Ternopil) have already decided to transfer land plots for this investment. Thus, the M-30 highway will become **the Road of International Unity** in supporting the Ukrainian people in their struggle for freedom and peace. This is also true in a metaphorical sense: In the context of the Red Cross Medical Center's activities, the Road of Unity should become not only a symbol of a united Ukraine, but also of a united Europe and the free world, in the quest **to heal the geopolitical situation** - to end the war in Ukraine.

RED CROSS MED CENTER
Innovative network of medical centers in Ukraine
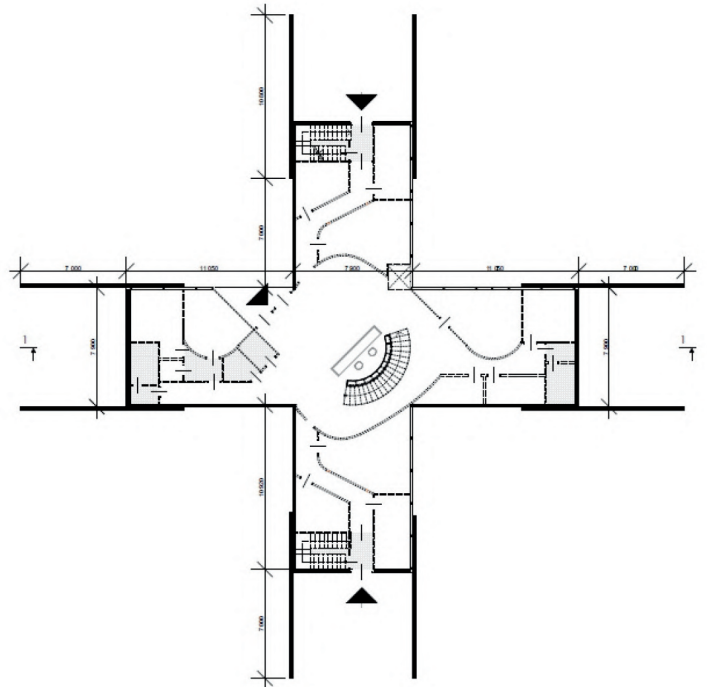

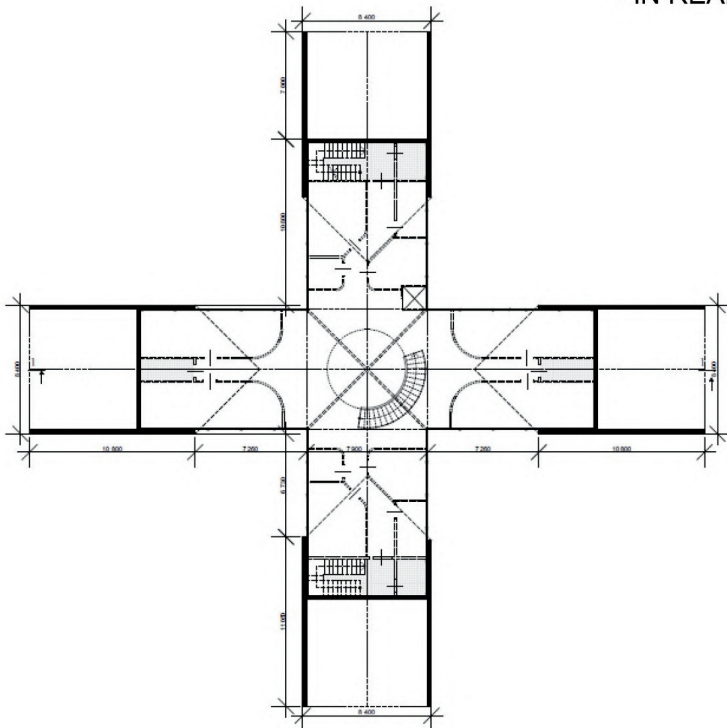

ЧЕРВОНИЙ ХРЕСТ МЕД ЦЕНТР

Kraków, 16.01.2024

Opinia dla RED CROSS MED CENTER - sieć Centrów Wsparcia i Rehabilitacji na terenie Ukrainy

Od wybuchu wojny w Ukrainie, Stowarzyszenie Polska Misja Medyczna wspiera ukraińską służbę zdrowia, prowadząc programy medyczne dla szpitali i mieszkańców Ukrainy. PMM w ciągu dwóch lat wyposażała 42 oddziały neonatologiczne oraz przeszkoliła ich lokalny personel medyczny, wyposażała w sprzęt medyczny 86 szpitali i finansuje pracę trzech klinik mobilnych i mobilnego laboratorium na Wschodzie Ukrainy. PMM prowadzi rozpoznanie potrzeb medycznych w społecznościach lokalnych, gdzie realizuje interwencje medyczne i zbiera dane statystyczne do właściwego konstruowania pomocy.

Biorąc pod uwagę doświadczenie Polskiej Misji Medycznej, projekt RED CROSS MED CENTER autorstwa art. proj. arch. Aleksandra Janickiego to niezwykle istotna inicjatywa o znaczeniu tak praktycznym, jak i symbolicznym. 80% pacjentów klinik mobilnych to osoby wymagające wsparcia psychologicznego i często leczenia psychiatrycznego. Ich problemy ze zdrowiem psychicznym są wynikiem przeżytych traum wojennych.

Stworzenie sieci punktów medycznych wspierających mieszkańców Ukrainy w walce z traumami jest na chwilę obecną, a i w dalszej perspektywie, celem wartym szczególnego, długotrwałego wsparcia. Projekt tworzony we współpracy zespołu architektów z Polski i Ukrainy, stanowi kolejny ważny etap w wspieraniu narodu ukraińskiego. To niezwykle ważny projekt dla Ukrainy, zwłaszcza w chwili obecnej, po dwóch latach wojny, która zrujnowała nie tylko infrastrukturę tego kraju, ale także życie psychiczne jego mieszkańców. RED CROSS MED CENTER to plan pomocy w tworzeniu konkretnych inwestycji, będących miejscami pomocy psychologicznej i społecznej dla ofiar wojny. RED CROSS MED CENTER to niezwykle ważny znak ze strony Polski i Europy – symbol wsparcia w planie odbudowy Ukrainy teraz i po zakończeniu wojny.

Polska Misja Medyczna popiera inicjatywę polskich i ukraińskich architektów, mając nadzieję na jej szybką realizację.

Innovative network of medical centers in Ukraine

ЧЕРВОНИЙ ХРЕСТ МЕД ЦЕНТР

RED CROSS MED CENTER - sieć Centrów Wsparcia i Rehabilitacji na terenie Ukrainy

W warunkach konfliktu zbrojnego stan psychiczny i zdrowie psychiczne stają się szczególnie istotnymi aspektami życia. Wielu ludzi doświadcza stresu, wyczerpania, lęku i paniki, ale często nie ma dostępu do niezbędnego wsparcia psychologicznego. W związku z tym idea tworzenia specjalistycznych centrów jak RED CROSS MED CENTER, w których ludzie są bezpieczni i mogą się zwracać i otrzymywać profesjonalną pomoc, nabiera szczególnego znaczenia.

Jednym z głównych aspektów, które należy brać pod uwagę, jest zespół stresu pourazowego (PTSD), który może rozwijać się w wyniku traumatycznych wydarzeń.

Według najnowszych badań przeprowadzonych przez naukowców z Uniwersytetu w Kijowie, znaczna część społeczeństwa ukraińskiego wykazuje zwiększony poziom stresu związany z aktualnym konfliktem wojennym. Raport ujawnia, że wielu badanych doświadcza objawów zespołu stresu pourazowego (PTSD) oraz depresji. Analiza wskazuje na kilka szczególnie dotkniętych grup, takich jak kobiety, osoby w wieku od 26 do 40 lat, bezrobotni oraz ci, którzy zostali przesiedleni wewnątrz kraju lub za granicę. Anton Kurapov, jeden z autorów raportu, podkreśla, że niezależnie od tego, czy badani byli bezpośrednio zaangażowani w tragiczne wydarzenia czy nie, wszyscy wykazują tendencję do doświadczania ostrego stresu i przejawiają pewne objawy zespołu stresu pourazowego.

RED CROSS MED CENTER CEL: stworzenie sieci Centrów Wsparcia i Rehabilitacji
Każdy z ośrodków ma być miejscem:

- udzielanie informacji na temat objawów PTSD oraz wskazuje skuteczne metody leczenia,
- definiowanie metod leczenia i wskazywanie miejsc gdzie można szukać pomocy w formie zdalnej poza ośrodkami pomocowymi, w tym w sieci,
- kompleksowe leczenie obejmuje współpracę z lekarzem rodzinnym i specjalistami ds. zdrowia psychicznego,
- zapewnienie podstawowych potrzeb, takich jak bezpieczeństwo, żywność i przywrócenie regularnego snu,

- edukacja pacjentów skutecznego zarządzania swoim stanem psychicznym w sytuacjach kryzysowych oraz nauka udzielania wsparcia ich bliskim,
- edukacyjne dotyczące szybkich metod samo-pomocy, technik uziemienia i oddechu antystresowego.

Mogą również stanowić platformę do komunikacji i wymiany doświadczeń między ludźmi, którzy przeżyli podobne sytuacje traumatyczne.

Jednym z kluczowych aspektów pracy RED CROSS MED CENTER - Centrów Wsparcia i Rehabilitacji jest dostarczanie matkom niezbędnych narzędzi do wspierania zdrowia psychicznego swoich dzieci. W warunkach działań wojennych, gdzie wiele rodzin doświadcza stresu i sytuacji niepokojących, matki odgrywają kluczową rolę w tworzeniu stabilności i emocjonalnego bezpieczeństwa dla swoich dzieci. To właśnie matki często odgrywają decydującą rolę w kształtowaniu odporności i adaptacji dzieci do sytuacji stresowych. Takie programy mają na celu dostarczenie kobietom narzędzi, które pomogą im być nie tylko wsparciem dla swoich dzieci, ale także aktywnymi uczestniczkami w procesie psychologicznego odbudowywania rodziny.

Edukacja matek ma się skupić na efektywnej komunikacji z dziećmi, wspieraniu ich rozwoju emocjonalnego i udzielaniu wsparcia w trudnych sytuacjach.

Wsparcia psychologiczne ma również istotne znaczenie dla rodzin, których członkowie przebywają na froncie. Nauczanie technik wsparcia na odległość, a także dostarczanie narzędzi do zdrowia emocjonalnego dzieci, to kolejny istotny element pracy takich centrów.

Podsumowując, utworzenie RED CROSS MED CENTER - Centrów Wsparcia i Rehabilitacji w czasie wojny to niezbędny krok w wspieraniu i odbudowie naszego społeczeństwa. Mają one za zadanie dostarczyć ludziom nie tylko profesjonalnej pomocy, ale także wsparcia społeczności, która rozumie ich trudności i jest gotowa pomóc w procesie psychologicznej odbudowy.

RED CROSS MED CENTER - мережа Центрів підтримки та реабілітації в Україні

В умовах збройного конфлікту стан психіки та психічне здоров'я стають особливо важливими аспектами життя. Багато людей відчувають стрес, виснаженість, страх і паніку, але часто вони не мають доступу до необхідної психологічної підтримки. У зв'язку з цим ідея створення спеціалізованих центрів, таких як RED CROSS MED CENTER, де люди можуть бути в безпеці та отримувати професійну допомогу, набуває особливого значення.

Одним з основних аспектів, які слід враховувати, є посттравматичний стресовий синдром (PTSD), який може розвиватися внаслідок травматичних подій.

Згідно з останніми дослідженнями, проведеними вченими з Київського університету, значна частина українського суспільства виявляє збільшений рівень стресу, пов'язаного з поточним воєнним конфліктом. Звіт розкриває, що багато опитаних досвідчують симптомів посттравматичного стресового синдрому (PTSD) та депресії. Аналіз вказує на кілька особливо постраждалих груп, таких як жінки, особи віком від 26 до 40 років, безробітні та ті, хто був переміщений всередині країни або за кордон. Антон Курапов, один з авторів звіту, наголошує, що незалежно від того, чи брали опитані безпосередню участь в трагічних подіях чи ні, всі вони мають тенденцію до досвідження гострого стресу та виявляють певні симптоми посттравматичного стресового синдрому.

Мета RED CROSS MED CENTER: створення мережі Центрів Підтримки та Реабілітації. Кожен з центрів має бути місцем:

- надання інформації про симптоми PTSD та вказівки на ефективні методи лікування,
- визначення методів лікування та вказівка місць, де можна шукати допомогу дистанційно, поза допоміжними центрами, включаючи мережу,
- комплексне лікування, яке охоплює співпрацю з лікарем сімейної медицини та фахівцями з психічного здоров'я,
- забезпечення основних потреб, таких як безпека, харчування та відновлення регулярного сну,
- навчання пацієнтів ефективному управлінню своїм психічним станом в кризових

- освітні заходи щодо швидких методів самопомоги, технік заземлення та антистресового дихання.

Вони також можуть виступати платформою для спілкування та обміну досвідом між людьми, які пережили подібні травматичні ситуації.

Один з ключових аспектів роботи RED CROSS MED CENTER - Центрів Підтримки та Реабілітації - це забезпечення матерям необхідних інструментів для підтримки психічного здоров'я своїх дітей. У воєнних умовах, де багато сімей переживає стрес і тривожні ситуації, матері відіграють ключову роль у створенні стабільності та емоційної безпеки для своїх дітей. Саме матері часто визначають роль у формуванні стійкості та адаптації дітей до стресових ситуацій. Такі програми спрямовані на надання жінкам інструментів, які допоможуть їм бути не лише підтримкою для своїх дітей, але й активними учасницями в процесі психологічного відновлення родини.

Навчання матерів має фокусуватися на ефективній комунікації з дітьми, підтримці їх емоційного розвитку та наданні підтримки в складних ситуаціях. Психологічна підтримка має також важливе значення для сімей, чії члени перебувають на фронті. Навчання технік підтримки на відстані, а також забезпечення інструментів для емоційного здоров'я дітей - це ще один важливий елемент роботи таких центрів.

Підсумовуючи, створення RED CROSS MED CENTER - Центрів Підтримки та Реабілітації під час війни - це необхідний крок у підтримці та відновленні нашого суспільства. Вони мають за мету забезпечити людям не лише професійну допомогу, але й підтримку від спільноти, яка розуміє їх труднощі та готова допомогти у процесі психологічного відновлення.

Dear Aleksander!

Implementing our previous agreements during the Ukrainian-Polish artistic action "TRANS/IT/US", which took place in the Svirzh Castle (Lviv Region) this spring, on behalf of the Board of the Lviv Regional Organization of the National Union of Architects of Ukraine, I am addressing you with a proposal regarding further cooperation.

Specifically, I'm talking about the further implementation of a number of buildings of the newest rehabilitation centers for victims of the War in Ukraine - **RED CROSS - UKRAINA**. I believe that in cooperation with our partners in Lviv, Stryj (Lviv region) and Berezhany (Ternopil region) and with the support of targeted charitable funds, we can start the production of design and cost documentation for these objects.

***For reference:** RED CROSS - UKRAINA is a rehabilitation center with a special emphasis on the treatment of war-related injuries, dedicated to war veterans and their families. Its basis is the In Corpore Diagnostics and Therapy Center, which offers comprehensive diagnostic and treatment assistance using the most modern devices and innovative directions and methods of work. The center will use the latest treatment methods for both children and adults.*

Such a Center will offer therapy not only by psychologists, teachers, neurologists and physiotherapists, but also by choreo therapists, art therapists, music therapists, etc.

The Center's staff are highly qualified personnel who will be able to work with military personnel, internally displaced persons, as well as children with PTSD, anxiety disorders, depression and many other problems caused by military actions.

Best regards,
Chairman of the Board
Lviv Regional
organization of the National
Union of Architects of Ukraine

Вельмишановний Александре Яніцький !

Реалізуючи наші попередні домовленості під час україно-польської мистецької акції "TRANS/IT/US", що відбулася у Замку в Свіржі (Львівська область) весною цього року, від імені Правління Львівської обласної організації Національної спілки архітекторів України, звертаюсь до Вас з пропозицією щодо подальшої співпраці.

А саме мова йде про подальшу реалізацію низки будівель новітніх реабілітаційних центрів для постраждалих від Війни в Україні – **RED CROSS – UKRAINA**. Вважаю, що у співпраці з нашими партнерами у Львові, Стрию (Львівська обл.) та Бережанах (Тернопільська обл.) та за підтримки цільових благодійних фондів ми можемо розпочати виготовлення проектно-кошторисної документації по цих об'єктах.

Для довідки: RED CROSS - UKRAINA – реабілітаційний центр з особливим акцентом на лікування травм, пов'язаних з війною, присвячений ветеранам війни та їхнім родинам. Його основою є Центр діагностики та терапії In Cogroge, що пропонує комплексну діагностичну та лікувальну допомогу з використанням найсучасніших апаратів та інноваційних напрямків і методів роботи. У центрі використовуватимуться новітні методики лікування як дітей, так і дорослих.

Такий Центр пропонуватиме терапію не лише психологів, педагогів, неврологів та фізіотерапевтів, але й хореотерапевтів, арт-терапевтів, музикотерапевтів тощо.

Співробітники Центру – це висококваліфіковані кадри, які зможуть працювати з військовими, внутрішньо переміщеними особами, а також з дітьми з ППРС, тривожними розладами, депресією та багатьма іншими проблемами, викликаними військовими діями.

З повагою,
Голова Правління
Львівської обласної
організації Національної
Спілки Архітекторів України

Safety Architecture. Red Cross Med Center

Ola Kloc
27 of February '24

The fear and insecurity of residents of war zones requires a special, empathetic form of assistance. A space that provides a sense of security on many levels is offered by the **Red Cross Med Center**, a network of facilities where those struggling with the trauma of war will find support.

Aleksander Janicki, an artist, creator of interactive installations and author of multimedia and architectural projects, has been active since the beginning of the war in Ukraine both in providing direct aid to refugees and in supporting Ukrainian architects, including organizing exhibitions of their work, judging competitions and, finally, engaging them to collaborate on a unique project. We're talking about the **Red Cross Med Center** initiative, an innovative network of medical centers in Ukraine to help those facing war trauma.

We talk about the project's genesis and innovative solutions with its initiator, Alek Jancki, president of AYA Found and a member of the Expert Committee of the National Association of Architects of Ukraine on reconstruction and international cooperation

Ola Kloc: How was the Red Cross Med Center project born?

Alek Janicki: From the first day of the war I was at the epicenter of events. On February 24, 2022, the exact day the war broke out, I had a concert at ■ THE KTO THEATER [performance "BlackSatori" — editor's note]. It was a shocking news, the concert was dedicated to Ukraine. Later I took an active part in the exodus of Ukrainians to Krakow — Żenia and Dania (whose yellow hands against the sky are part of the graphic identity of the project to help Ukraine ■ KULTURA FUTURA ŚWIT implemented by the AYA Found) still live in the adapted part of APTEKA Gallery. I had and still have regular contact with the refugee population in Krakow, and by the fact that for the past two years I have been traveling regularly to Ukraine with projects, exhibitions, performances, to the Wiża conference or to the center for international cooperation created by the **National Association of Architects of Ukraine** and AYA Found in the castle in Svirzh, I know on a regular basis what is going on there.

AB ▶ Architektura ▶ Newsy ▶ Patronaty ▶ Ola Kloc ▶ 2024

The bestial warfare, especially in the first period, was striking, because it also affected the civilian population. So it was known that a powerful threat to the community lurked in the background, the threat of trauma that is an immanent part of war time. He works with institutions related to medicine in the broadest sense, including the **In Corpore** Foundation in Katowice. At the end of 2022, a meeting was held to thank the AYA Found for its support for the Ukrainian community, which was attended by **Wiaczesław Wojnarowski**, Ukrainian consul in Krakow, **Jarosław Wiczorek**, honorary Ukrainian consul in Katowice, and **Iwona Sosnowska-Wiczorek**, president of the In Corpore Foundation, among others. I remember a poignant speech by **Bartłomiej Sienkiewicz** [the current Minister of Culture and National Heritage — editor's note] on war traumas and so-called post-traumatic stress of a frightening scale. It became clear that in addition to this obvious space of activities related to concrete aid, the future also required dealing with the sphere from the field of psychology. Out of this need, I came up with the idea for Red Cross — a network of trauma centers. Death, separation from loved ones, constant airplane alerts, and at the same time not easy everyday life affect millions. Most of them are experiencing a **mental health crisis**.

Ola: The project took the shape of an isosceles cross, what is the reason for such an arrangement?

Alek: There have been situations where medical infrastructure has been shot at. The idea of the Red Cross is that places that are marked with it are safe — they are protected by international law. Not only that — an attack on such marked places is qualified immediately as a war crime. So I thought, couldn't it be possible to go a step further and build a **safe building** — **protected by international law**, which by its form and color scheme would be an obvious element in the infrastructure. So I first contacted the Polish Red Cross, and they further contacted Geneva, asking if we could carry out such an action at all. According to international law, it is Ukraine, a country under martial law, that must apply for such a construction permit. Red Cross staff in Geneva could not get out of their awe — they had never received such an inquiry before. The permit was tentatively granted to us.

Such permits are granted by the Red Cross only for times of war. However, according to our assumption, this infrastructure is designed to remain also for the post-war and reconstruction period. The most important thing is the sense of safety for patients. On the one hand, the building takes the form of the Red Cross [isosceles cross — ed. note] — then it protects against a possible attack, and on the other hand — the "armor" covering the building can be pulled apart and the shape of the building changes: its volume increases, glazing appears, access to daylight — a kind of oasis with an ecosystem of greenery inside is created.

***Ola:** You mentioned movable modules, you also included recycled building materials in the design, among other things. Tell us a little more about the proposed architectural and technological solutions, please.*

Alek: It is a **performative building** — we have a solution for peacetime and wartime, the building will also be able to extend in situations where there is no threat of shelling. Its form is dynamic.

I also wanted the formal solution of the medical point to be followed by innovative technologies, which would be a kind of signpost for the idea of rebuilding Ukraine. Model features that relate to the ideas of the **New European Bauhaus**, solutions that strive for sustainable development.

As such, the entire **building is safe** on several levels. First, because of the shell, which is a cover in critical situations — I mean the elements of the module that are movable; second, it is safe inside — inside we plan to create an ecosystem where therapists and people dealing with trauma will feel safe. So we will introduce elements related to **BioAktiW** — a specific that causes the atmosphere inside to be free of pathogens. Thus, this will be the first facility in the world to systemically introduce solutions that would give a sense of **bacteriological safety** in a dynamically changing future. The next levels of security are **energy security**, **digital security** (developed in cooperation with the AGH University of Science and Technology), which we want to ensure by introducing a security system known from airplanes into the building, **security related to climate challenges** through the use of heat pumps and other solutions that we want to implement as a pilot — replacing styrofoam insulation with compressed straw, in which we are supported by **VestaEco**, the first Polish manufacturer of such solutions in Europe.

All these elements form a set that defines the individual buildings in the series, as we plan to create a network of them, with each facility tailored to the needs of local communities. **The project is scalable.** We are not building a series of identical facilities. For now, in consultation with local governments in Ukraine, we have selected five locations [Stryi, Brzeżany, Ternopil, Mostyska, Bibrka — editor's note]. We are at the design stage, in which we are determining what acreage we have, what the scale of the facility will be, the specific functions will be closely related to the expectations of the community. For example, the first facility to be built in Stryi will be connected to the existing hospital infrastructure — it will be a complementary element for it.

M-30 / Road of Unity of Ukraine / Road of International Unity

The road was created as part of the 30th anniversary of Ukraine's independence in 2021 from the merger of the pre-existing M04 and M12 routes; the Red Cross network takes form in the cities marked on the map © AYA Found

The Red Cross Med Center thus has a defined primary goal — therapeutic — while each time — and this is also what our cooperation with Ukrainian architects Bohdan Goy, professor at Lviv Polytechnic University, and Mykola Sheremeta, head of the Lviv branch of the National Union of Architects of Ukraine, is about. A set of main elements, defined in Poland, will be defined locally in consultation with local governments, and detailed designs will be created for specific objects with targeted functional tasks, using Polish know-how derived from business, but also innovative solutions coming from the academic environment of Krakow's AGH and URK universities.

From February 28, in the Main Post Office Building in Krakow, the exhibition "POSTMAN" summarizing Alek Janicki's activities in support of Ukraine and continuing artistic interventions carried out jointly with the **National Association of Architects of Ukraine** and the **AYA FOUND** will have its opening. This audiovisual performance will include forms of video, photography and a site-specific installation on the site of the former Main Post Office, among others.

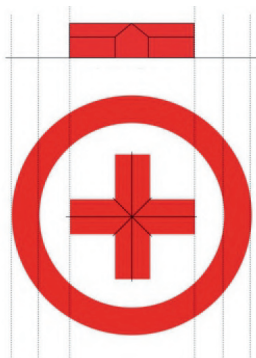

The main theme of the event will be never-sent postcards — an artistic documentation of the state of war and artistic, creative activities, conferences, discussions, meetings — providing a platform for dialogue with Ukraine, the organizers announced.

The Red Cross Med Center project will not be absent from the exhibition. It will be an opportunity not only to learn about the concept, but also to make your contribution to its realization — by purchasing a card with a commemorative stamp. The exhibition will be open until March 28.

details and contact:

The project was initiated by the AYA Found and the National Union of Architects of Ukraine. The author of the concept is Aleksander Janicki, and the coordinator of the project is Aleksander Baranowski, secretary of the National Union of Architects of Ukraine in Kiev. The European Union Prize for Contemporary Architecture – Mies van der Rohe Award is one of the most prestigious awards for contemporary architecture in Europe.

On May 14, the prestigious EU Awards in the field of Contemporary Architecture - Mies van der Rohe Awards - the most prestigious architectural award in Europe, took place in Barcelona. The ceremony inaugurated the Architecture Weeks in Barcelona, which will last until June 28.

An important element of the exhibition was the presentation of the Red Cross Med Center concept by Aleksander Janicki, the design and implementation of which is to take place in Ukraine in cooperation with architects from Ukraine. The exhibition was located in the Victoria Eugenie Pavilion next to the Top-7 European Mies van der Rohe Prize exhibition. Crowds of visitors prove the great interest of Barcelona's residents and guests in the future of architecture.

On May 16, they took part in a discussion on the architecture of Ukraine. The speakers' speeches aroused great interest among Spanish colleagues. Aleksander Baranowski presented the goals and tasks in his speech

National Association of Architects of Ukraine, defined possible directions of cooperation between architects of Ukraine and Europe. The Polish-Ukrainian RedCross project, concerning the construction of diagnostic and rehabilitation centers in various regions of Ukraine, was presented as an example of such cooperation.

PAST / PRESENT / FUTURE

The conference continues to bring together governments, businesses, civil society and the media to foster cross-sector exchange and cooperation for the benefit of Ukraine. This time, it focuses on best practices and ideas for reinvesting in businesses, healing trauma and reimagining Ukraine's future.

We talked about the Red Cross Med Center.

Background of II KER 2024

The 2nd Distributed Energy Congress - an event organized by the AGH University of Science and Technology - attracted 2,000 participants to the capital of Małopolska, including representatives of public administration and local government, scientists, entrepreneurs from various sectors of the economy and young people. Thus, KER confirmed its brand as one of the most important forums for the energy transition (TE) debate in Poland. During the Congress, key challenges related to the need to change the model of the Polish energy sector were discussed, expert recommendations were made on the industry's demands, and concrete declarations were made from the stage by government representatives.

ARCHITECTURAL HACKATHON / KULTURA FUTURA e-POLIS / II KER 2024.

The drawn architectural projects in the conceptual phase are subject to analysis in terms of distributed energy. Analyses carried out in interdisciplinary teams with your participation / Distributed Energy Ambassadors / and architects and designers. The task of the hackathon groups was to develop a defining type of proposed design strategy for energy optimization of each facility. The aim of the 2-day work was to find an answer to the question of optimal application of RES and energy solutions in the master plan, in the context of location in a specific urban layout, architectural context and existing infrastructure (e.g. MPEC). Each team proposed optimal RES-related solutions to meet the challenges of a warming climate. This is intended to be an expert opinion providing design guidelines for architects and designers at the initial stage of conceptual design work.

vestaeco

VestaEco is a Polish manufacturer of ecological insulation materials. The plant is located on an industrial park in Wielkie Łęcko (Warmian-Masurian Voivodeship). The location in an area with a strong agricultural tradition facilitates the logistics of obtaining raw material and allows to reduce its cost. The company has its own modern production hall, storage facilities, as well as a transport fleet of trucks and agricultural machinery. They have an administrative office in Wielkie Łęcko, as well as a sales office in Warsaw.

The company's own research and development laboratory guarantees the high quality of its products through ongoing sampling and quality tests. The company has the necessary design-construction and production base supported by an extensive machinery park, which, combined with a qualified staff, allows the company to carry out any, including unusual orders for the construction and furniture industry.
